1) Add country dropdown to home view (**home.html**). Add the following countries to this dropdown

Please use the below code snippets

In home.html

```
<select ng-model="locale" ng-change="changeLanguage()">
   <option value="">-- Select a Country --</option>
   <option ng-repeat="country in countries" value="{{country.locale}}">{{country.name}}</option>
</select>
```

In home_controller.js

```
$scope.countries = [
     {name: 'United States', locale: 'en-us'},
     {name: 'France', locale: 'fr-fr'},
     {name: 'Russia', locale: 'ru-ru'}
  ];
```

2) Add **ng-change** for the above select box

3) In **ng-change** event handler function changeLanguage(), Please use the below code

```
 var selectedLocale = $scope.locale;
 //Sets the selected locale into session storage

 sessionStorage.setItem("SELECTED_LOCALE", selectedLocale);
 $window.reload();
```

4) Add the below script to main page html to localize the dates & currency symbols

```
 var selectedLocale = sessionStorage.get("SELECTED_LOCALE");

    document.write("<script src='https://code.angularjs.org/1.2.5/i18n/angular-locale_"+selectedLocale+".js'></script");
```

Note: We can enhance this script later

5) create translation files with locales mentioned in above dropdown (en-us.json,fr-fr.json & ru-ru.json)

6) set the defualt language with selected locale from the dropdown

```javascript
myAppModule.config( [ '$translateProvider', function($translateProvider) {
        $translateProvider.useStaticFilesLoader( {
                prefix : 'l18n/',
                suffix : '.json'
        });
        // Tell the module what language to use by default
        $translateProvider.preferredLanguage(selectedLocale);
    } ])
```
